## Centurion's Beechcraft KING AIR C90B – N8096U

Centurion Flight Services has been providing safe and efficient air charter since 1983.

**Your safety and comfort is our number one concern!**

The King Air C90B masterfully combines comfort, performance and economy. On a typical trip of 500 miles, the King Air C90B outshines light business jets on fuel and operating costs, while getting you there at nearly the same time.

Because it is a turboprop, the King Air C90B is amazingly fuel-efficient. With a maximum range of just under 1,300 nautical miles, it easily takes a pilot and five passengers where they need to go in a cabin so roomy and spacious that

it is easy to work, conduct meetings, or just stretch out and enjoy the trip.
